Dear Doctor,

Please look at the enclosed information sheet for our new EAT SLOWER® DOG DISH. This is a Specialty Dish for those dogs who are “fast eaters.” It was inspired by our black lab, Jed, and was designed specifically to help dogs learn to eat at a slower pace. It is based on my Pat. No. US 7,207,291. Our website has detailed information and pictures.

Our dog, Jed, has gone from a dog food gulper to a gentleman diner with the use of this specialty dish. Most owners should see a marked improvement, characterized by slower eating times and a more deliberate eating style.

Based on the research of Dog Bloat from Purdue University School of Veterinary Medicine, we recommend that dog owners of breeds at risk for Dog Bloat, see their veterinarian to establish a program of prevention. I believe this dish can be helpful as part of a complete care program for dogs who are “fast eaters.”

If you have canine patients that you feel could benefit from this dish, please direct those dogs’ owners to our website for more information and purchase. You may also purchase in bulk from our website, at a reduced cost, for resale in your office/clinic/hospital.

As a retired medical professional, I hope the EAT SLOWER® DOG DISH will be a help to your canine practice. I believe it will also be a blessing to those dog’s owners!

Yours truly,

Thomas R. Watts DDS, MS
